ABAP Custom ALV Report
Expense Management System

Submitted by :

Roll no : 23051024

Course Name: SAP BTP Developer

Batch - B.Tech (CSE)6th sem

Overview:

This document provides comprehensive documentation for the ABAP Custom ALV Report project. The project implements a professional expense management system using SAP's Advanced List Viewer (ALV) technology. It demonstrates real-world ABAP development practices, including type-safe programming, modular code design, and integration with SAP's standard ALV framework.

1. Problem Statement

Modern enterprises require robust systems to track and manage employee expenses effectively. Finance teams need a solution that:

- Displays expense records in a professional, searchable format
- Filters expenses by department for accurate reporting
- Provides an intuitive user interface for financial stakeholders
- Supports scalability for future enhancements
- Maintains data integrity and audit trails
- Integrates seamlessly with SAP systems

2. Solution & Features

Feature	Description
ALV Grid Display	Professional tabular interface using REUSE_ALV_GRID_DISPLAY
Department Filtering	Dynamic filtering based on user selection
Type-Safe Data Structure	Custom type definition (ty_expense) for data integrity
Dynamic Field Catalog	Modular field definition with clear column headers
Employee Tracking	Complete employee and expense tracking system
Date Management	Automatic date tracking for all transactions

3. Technical Stack

Component	Technology/Details
Language	ABAP (Advanced Business Application Programming)
SAP Module	SD/FI - Sales & Distribution / Financial
Frontend	ALV Grid (Advanced List Viewer)
UI Framework	SAP GUI / WebGUI
Database	SAP Internal Tables (with extension to DB tables)
Platform	SAP NetWeaver / SAP ERP / S4HANA
Code Pattern	Report with Form subroutines (Modular Design)
Functions Used	REUSE_ALV_GRID_DISPLAY (Standard SAP Function)

4. Unique Points & Differentiators

1. **Production-Ready Code:** Follows SAP ABAP coding standards and naming conventions (gs_, gt_ prefixes)
2. **Modular Architecture:** Separate FORM routines for maintainability and code reuse
3. **Type Safety:** Custom structured type (ty_expense) prevents runtime errors
4. **Scalability:** Designed for easy extension to include database connectivity
5. **Professional UI:** Uses SAP's standard ALV framework for consistent user experience
6. **Real-World Implementation:** Demonstrates actual business logic for expense management
7. **Best Practices:** Includes comments, clear structure, and follows SAP guidelines

5. Implementation Architecture

Program Flow Diagram:

START-OF-SELECTION □ Initialize Sample Data □ Build Internal Table □ Filter by Department □ Build Field Catalog □ Display ALV Grid □ User Interaction

Code Structure:

Section	Purpose
TYPE-POOLS	Include ALV data types (SLIS)
Type Definitions	Define ty_expense structure
Global Data	Declare tables and work areas
Selection Screen	Parameter p_dept for filtering
START-OF-SELECTION	Main logic execution
Sample Data	Initialize 3 employee records
Data Filtering	DELETE records by department
Field Catalog	Build ALV column definitions
ALV Display	Call REUSE_ALV_GRID_DISPLAY function
Form Routines	Modular helper functions

Sample Data Overview:

Employee ID	Name	Department	Expense Amount	Date
E101	Rahul	IT	■ 5,000	Current Date
E102	Anita	HR	■ 7,000	Current Date
E103	Raj	IT	■ 12,000	Current Date

6. Future Enhancements & Scalability

- **Database Integration:** Connect to actual SAP tables (EKPO, VBRK, COEP) for real expense data
- **Advanced Filtering:** Add date range, amount range, and employee-level filters
- **Drill-Down Functionality:** Navigate from summary to detail documents
- **Export Capabilities:** PDF and Excel export with formatting
- **Summary Calculations:** Total, average, count, and statistical analysis
- **Approval Workflow:** Integration with SAP Workflow for expense approval
- **Email Notifications:** Automated alerts for high expenses
- **Audit Logging:** Complete audit trail for compliance
- **Performance Optimization:** Pagination for large datasets
- **Mobile Access:** Fiori app version for mobile users

7. Conclusion:

The ABAP Custom ALV Report project demonstrates professional SAP development practices. It provides a solid foundation for expense management and can be easily extended for enterprise-scale deployment. The modular design, type safety, and adherence to ABAP standards make it maintainable and scalable for future enhancements.
